

LARRY SAUSEDA

CYBERSECURITY & THREAT INTELLIGENCE ANALYST

(210) 550-1515 | Joliet, Illinois | [linkedin.com/in/larry-sauseda](https://www.linkedin.com/in/larry-sauseda)

PROFESSIONAL SUMMARY

Cybersecurity and threat intelligence professional with 6+ years of U.S. Navy experience analyzing SIGINT and open-source intelligence, identifying emerging threats and adversary TTPs, and producing decision-ready reporting for interagency partners. CompTIA Security+ certified with a B.S. in Computer Science and hands-on experience in incident triage, log and network traffic analysis, vulnerability assessment, Linux/Windows administration, and evidence preservation. Proven leader in quality assurance, analyst training, and operational oversight.

CORE COMPETENCIES

Security Operations: Incident Triage | Log Analysis | Network Traffic Analysis | Vulnerability Management | Incident Response | Evidence Preservation

Tools & Platforms: Wazuh | Wireshark | Nmap | Nikto | OPNsense | Linux | Windows Server | Active Directory | Kali Linux

Networking & Systems: TCP/IP | DNS | Firewall/ACL Configuration | Network Segmentation | SSH | Virtualization

Threat Intelligence: OSINT | SIGINT | Threat Detection | TTP Analysis | Geospatial Analysis | Risk Assessment

Programming & Data: Python | JavaScript | SQL | NoSQL

CYBERSECURITY PROJECTS & LABS

Incident Response & Digital Forensics Lab — Compromised DMZ Web Server

Linux | systemd | SSH | SHA-256 | SFTP | journalctl | Network & Process Analysis

- Investigated a simulated Linux DMZ compromise involving unauthorized privileged accounts, persistence mechanisms, suspicious executables, and anomalous service activity; contained accounts and stopped the malicious service.
- Preserved volatile data and forensic artifacts, calculated SHA-256 hashes, documented chain of custody, transferred evidence to a designated repository, and correlated authentication, process, filesystem, and system logs to reconstruct attacker activity.

Enterprise Security Homelab — Network Defense & Security Monitoring

OPNsense | Wazuh | AlmaLinux | Kali Linux | Windows Server | Active Directory | TCP/IP

- Built a segmented virtual enterprise environment with Windows, Linux, firewall, DMZ, and security-testing systems; configured OPNsense firewall/ACL rules to control LAN, DMZ, and WAN communications using least-privilege principles.
- Hardened Linux services and SSH, validated exposed ports, and used Wazuh and native system logs to investigate authentication activity, account creation, privilege escalation, and persistence indicators.

Vulnerability Assessment & Network Reconnaissance Lab

Nmap | Nikto | Kali Linux | Windows Server | Linux

- Performed host discovery, port/service enumeration, and web-server vulnerability assessment across a multi-host lab environment using Nmap and Nikto; documented findings to support remediation prioritization and defensive analysis.

PROFESSIONAL EXPERIENCE

UNITED STATES NAVY | Various Locations | April 2017 – April 2023

Intelligence Analyst | April 2017 – April 2023

- Collected and analyzed SIGINT and open-source intelligence to identify emerging regional threats, anomalous activity, and adversary tactics, techniques, and procedures (TTPs); applied GIS and geolocation methods to strengthen operational assessments.
- Produced 70+ intelligence reports for interagency and law enforcement partners, translating complex data into clear decision support while maintaining legal, oversight, and reporting standards.
- Monitored foreign-language media, communications, and behavior patterns to detect anomalies, assess risk, and provide early warning on developing threats and critical incidents.
- Reviewed intelligence against federal statutes, intelligence oversight policies, and evidentiary requirements to support accurate, compliant reporting.
- Coordinated with stakeholders to tailor intelligence products for varied audiences and used reporting tools and visualizations to communicate complex findings clearly.

Program Manager | May 2019 – April 2023

- Led 20+ personnel conducting intelligence analysis across 600+ targets in support of national security operations, overseeing production quality, information sharing, and daily mission execution.
- Delivered 70+ intelligence products in response to external Intelligence Community requests and coordinated stakeholder input to develop well-supported analytical assessments.
- Performed quality assurance on critical intelligence projects, reviewing products for accuracy, analytical rigor, and consistency with risk-modeling and reporting standards.
- Directed career development and daily operations for 35+ personnel while administering orientation and compliance training aligned with DoD intelligence requirements.

Training Coordinator | December 2018 – April 2023

- Built and managed a qualification program for 30+ personnel covering intelligence processes and database systems, improving analyst readiness and standardizing training delivery.
- Developed a follow-on supervisor qualification program for 10+ personnel that contributed to five personnel reaching full-performing supervisor status.
- Delivered 600+ hours of on-the-job operational training to 80+ personnel, increasing the number of qualified entry-level analysts by 150%.
- Managed required training for a 30-member unit, tracked completion, and revised instructional content for clarity, comprehension, and DoD compliance.

EDUCATION & CERTIFICATIONS

CompTIA Security+ (SY0-701) | September 2026

M.B.A., Accountancy & Data Analytics — Colorado Technical University | Expected August 2027

B.S., Computer Science — Colorado Technical University | June 2025

A.A., Spanish — Defense Language Institute | October 2022

SELECTED PROFESSIONAL DEVELOPMENT

Network Fundamentals | Enterprise Risk Management | Identity Intelligence | IC Analytic Tradecraft Standards | Intelligence Analysis Principles | SIGINT Reporting | Traffic Analysis | Cryptanalysis | Geolocation | Intelligence Laws & Oversight
